Re: FY2020 Offender Profile

Please find attached a copy of the FY2020 Offender Profile. The Offender Profile is a collection of important statistics about the Missouri Department of Corrections offender population.

The work of the department is challenging and ever-changing and the purpose of the statistical abstract is to answer many of the questions that the public, the legislature, and the department's own staff often ask about the offenders supervised by the department. In FY2020 the department admitted nearly 14,000 offenders to prison and over 35,000 offenders began a new probation or parole assignment. Every day the department supervises approximately 84,000 offenders.

In FY17 the Justice Center of the Council for State Government assisted the department in a Justice Reinvestment Initiative in Missouri involving many stakeholders in the criminal justice system and the legislature. Implementation of policies enacted by this review continue within the Department and, along with the impact of changes made to Missouri's criminal code beginning January 1, 2017, it will lead to more effective investments in assessment and programs to reduce recidivism and effectively manage what had become a disproportionately large female offender population.

As with most things, department operations have been impacted significantly by the COVID-19 pandemic over the past year. Staff have responded decisively to this challenge, taking necessary precautions and adjusting patterns of work to ensure the safety of offenders and co-workers. This response has involved the implementation of facility enhancements, monitoring of waste water for the virus, and the coordination of over 80,000 individual tests of offenders and staff.

I hope you find the Offender Profile useful. Comments or suggestions are always appreciated.

1. Trends

DOC Population and Trends FY2011 to FY2020

At the end of FY2020, Missouri Department of Corrections (DOC) supervised a total of 83,796 offenders, a decrease of 5,788 individuals from FY2019 (a net change of -6.5%). The field population decreased by 1,569 offenders from the prior year (Table 1.1). The male offender population decreased by 6.2% compared to FY2019. The total female offender population decreased by 7.3%. In review of the last ten-years, male and female trends follow similar trajectories with the exception of the temporary increases in the female population during FY2018 and FY2019. (Fig. 1.1).

Figure 1.1. Trends in Total and Gender-specific Missouri DOC Offender Population, by Fiscal Year, FY2010 to FY2019 (Female data are displayed on secondary [right-hand] axis with a different scale.)

Incarcerated Population FY2011 to FY2020

The total incarcerated population is 24,027 offenders at the end of FY2020, which is a decrease of 4,219 offenders from the prior fiscal year. In looking at the 10-year trend, the population increases from FY2011 to FY2018 have been followed by two years of decreases that place FY2020 population numbers for both the males and females below their respective FY2011 numbers (Fig. 1.2 and Table 1.2).

Figure 1.2. Trends in Total and Gender-specific Incarcerated Populations, FY2010-19 (Female data are displayed on secondary [right-hand] axis with a different scale.)

Supervised Population FY2011 to FY2020

Since September 1, 2012 offenders on probation and parole can earn compliance credits by maintaining good behavior and, thereby, reducing the time to discharge of their sentence (HB1525). As a result, the supervised population declines from 73,555 offenders in FY2012 to 59,769 in FY2020 -- a decrease of over 13,000 supervised offenders (Table 1.3). While the total number of parolees has continued to increase marginally since FY2016, the total number of probationers in FY2020 is lower than previous years and the total supervised population is 2.6% less it was for FY2019. The female supervised population decreased more than in the male supervised population (-4.54% vs -1.9%, respectively) (Table 1.3).

Incarceration Rates and US Comparison

Incarceration rates are a common measure used to compare prison populations among various jurisdictions. Incarceration rate is calculated by determining the number of incarcerated offenders per 100,000 individuals of the general population within the same jurisdiction. These measures are usually by calendar year and may be for the prior year to maintain compatibility with national and state corrections reporting and US Census Bureau estimates.

For 2018, Missouri's total incarceration rate is above the total U.S. incarceration rate. This is true for both white and black offenders. The Missouri incarceration rate of Hispanic offenders, however, is 45% of the U.S. incarceration rate (Table 1.4).

Table 1.4. Missouri general population, incarcerated population and incarceration rate by race/ethnicity for 2018 (United States incarceration rates shown for comparison.)

		R	ace		
	White	Black	Hispanic	Other	Total
Missouri Population for July 1, 2018*	4,857,174	698,641	253,474	317,163	6,126,452

Missouri: Number of Offenders per 100,000 Pop	400	1,445	245	66	496
Total US: Number of Offenders per 100,000 Pop [†]	221	1,180	542	664	437

^{*}Missouri population estimates, US Census Bureau 7/1/2018

Missouri's incarceration rate has shown an increase in every year since 2007 whereas nationally, the incarceration rate has been declining. Table 1.5 shows that Missouri's incarceration rate decreased for the first time in recent history in 2018.

Missouri's female incarceration rate has also been higher than the average of all states for each year in the ten-year span (Table 1.5). The female incarceration rate, on average, has slowly declined for all states while Missouri has experienced an increase from 2009 through 2017 (Fig. 1.6). From 2009 through 2018, the female incarcerated population increased 28.4% in our state (Table 1.7). The more recent, short-term trend, from 2016 through 2018, shows a 6.6% decrease in the female incarcerated population. When looking at female incarceration rates by state for 2018, Missouri is ranked as the 7th highest in the nation (Table 1.7).

Figure 1.5. Ten year trends in female incarceration rates for Missouri and all fifty states combined from 2007 to 2016

The incarceration rate for males in Missouri decreased 3.1% from 2009 through 2018. The more recent, short-term trend, from 2016 through 2018, shows a 6.4% decrease in the female incarcerated population. When looking at male incarceration rates by state for 2018, Missouri is ranked as the 9th highest in the nation (Table 1.8).

Table 1.7. Female incarcerated population and incarceration rate by state for 2009, 2016 and 2018, ranked in order of incarceration rate. (Change from 2009-2018 and 2016-2018 includes the change in number of offenders and percent change.)

Incarceration Rates and Felony Sentencing Rates in Missouri

Incarceration and felony sentencing rates are calculated using both the offender population and general population. Incarceration rates are calculated using the number of offenders incarcerated for a felony offense on a particular day (June 30 of the designated year). This measure includes offenders revoked from probation or parole and is often influenced by the time offenders are incarcerated.

Felony sentencing rates are calculated using the number of offenders sentenced to probation or prison for a new felony offense in a year. Both measures are reported as the number of offenders per 100,000 of the general population for the jurisdiction. It is important to recognize this distinction since a county may have a high sentencing rate but relatively low incarceration rate due to a high number of probation sentences.

By comparison, sentencing rates include felony prison and felony probation sentences and, thus, provide a more holistic picture of all felonies within a jurisdiction in that year. This causes different ranks for counties from the incarceration rate ranking. For example, though New Madrid County, Missouri, is not particularly populous, the relatively large numbers of felony sentences in FY2020 produce the highest felony sentencing rate (Table 1.10, Fig. 1.8).

Table 1.9. Incarcerated Population, Incarceration Rate and General Population by Missouri County as of June 30, 2020 (Ranking is based on incarceration rate, which is calculated as number of incarcerations per 100,000 general population.)

Incarceration Rate by Sentencing County, June 30, 2020

Figure 1.7. Map of Missouri counties shaded by felony sentencing rates as of June 30, 2020.

Missouri Counties Felony Sentencing Rate FY2020

2. Institutional Population

Demographics

The incarcerated female and male populations differ in racial/ethnic composition. On June 30, 2020, black offenders represent a lower percent in the female institutional population (15.7 %) than in the male institutional population (36.9 %). The reverse is true of white offenders; white offenders represent a greater proportion in the female population (79.2 %) than in the male population (60.4 %). All other racial and ethnic groups account for less than 3% of both male and female populations (Table 2.1).

^{*} Offenders identifying themselves as having a Hispanic ethnicity have been counted in the Hispanic race category

Commitment age is the age on admission to an institution in a new commitment cycle. As seen in Table 2.2, about ninety percent of the total incarcerated population enters a DOC correctional facility between 18 to 49 years of age. The most common age at prison commitment is 20 to 24 years for males (21.6% of all males) and between 25 to 29 years for females (22.1% of all females). Offenders, less than 20 years old at the time of commitment, account for 9.4 % of the incarcerated population. Persons committed at age 60 or older represent 2.1% of the population.

Table 2.3 displays current age data of incarcerated offenders. About 80% of the total incarcerated population in DOC correctional facility are between 18 to 49 years of age. The current population age trends reflect the aging of the most prominent cohorts of the commitment age. For the end of FY2020, the largest percent of offenders is between 30-34 years (16.7 %) followed closely by the 25-29 years and 35-39 years age group (15.2 %); offenders less than 35 years old represent 40% of the incarcerated population. As with commitment age, the most common age range for current age differs by gender: for female offenders, 30-34 years (20.8% of all females); for males, 30-34 years (16.4% of all males). Male offenders are represented nearly equally in the 25-29 years and 35-39 years age groups with the combined groups accounting for almost one-third (29.8%) of the male population. Overall, the male and female populations show similar age distributions (Fig. 2.1).

Figure 2.1. Age Group Distribution of Incarcerated Offenders on June 30, 2020

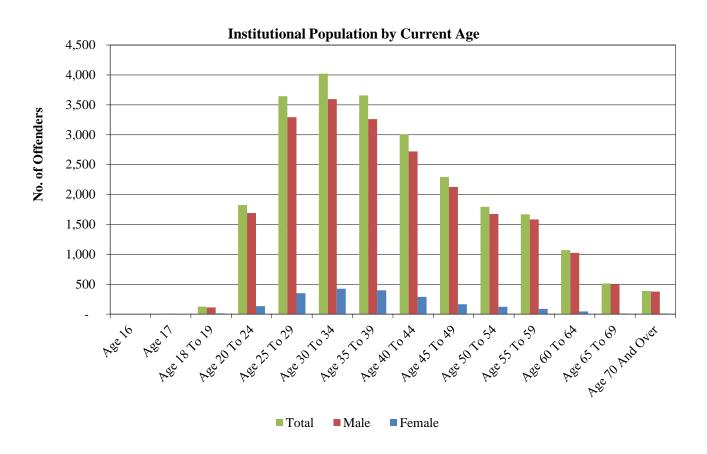

Table 2.4 reports the aging offender population (age 50 years and older) steadily increasing since FY2010; however, the rate of increase remains low at around 4% per year over the ten-year span. The aging male offenders make up 23.5% of the population in FY2020. While the numbers in the aging female population continue to increase, the average age remains consistently near 36 to 37 years from FY2010 to FY2020.

Offender Classification

Assessments are conducted on admission and during incarceration to classify an offender's health needs or skill levels. Some offenders may be 'unclassified' which includes recently admitted offenders who have not completed the classification process and offenders sentenced to 120-day programs. Statutory requirement states offenders admitted under a 120-day program are released within 120 days of admission if they successfully complete the program. Therefore, 120-day offenders do not receive a full classification upon admission due to the expected short prison stay.

The next four tables report offender classification levels as of June 30, 2020. A high school diploma/high school equivalency (HSD/HSE) education level is achieved by 70.9% percent of offenders and about 74% of offenders achieve a semi-skilled or greater vocational classification. Education levels are similar for male and females. However, women have higher levels of vocational readiness; about 60% of females are either 'skilled' or 'trained and skilled' whereas only about 44% of males obtain these classifications. A majority of the offender population (53.1%) has no medical problems. Male and females utilize routine sick calls almost equally. Females are about 2 times more likely to require 24-hr nursing care than males (5.4% vs. 3.3%, respectively). About eighty percent of offenders have no or mild mental health problems. Females require more mental health services. The percentage of females needing clinic care or medication for mental health problems is nearly two times that of males. See Table 2.5.

In May 2013, reclassification of custody levels reduced the number from five to three. An offender's custody level is still determined by length of sentence and institutional behavior. Offenders with a low risk assessments are assessed with Level I custody (minimum), if the time to release is less than six years. Offenders with low risk but with six to twelve years to release are assessed with Level II custody (medium) and offenders with more than twelve years to release are at level III (maximum).

Offenders assessed with a low custody level may have this assessment overridden for reasons of poor institutional adjustment, charges pending, and, in the case of sex offenders, failure to complete the Missouri Sex Offender Program (MOSOP). The lowest percent of offenders are in Level III (high risk)

custody for both males and females. However, males are more evenly distributed among the custody levels, while over half of females are classified as Level I (low risk) custody (Table 2.6).

In 2003, DOC introduced the substance abuse screening instrument, Screening for Alcohol and Chemical Abuse (SACA). SACA classifies offenders on a scale from 1 to 5, where a score of "1" indicates no substance abuse or substance dependence while a "5" indicates a severe substance abuse or dependence problem. Most assessments are completed on admission to prison and at the start of field supervision (probation or parole). Most offenders (90%) require substance abuse education or treatment; the greatest proportion requires intermediate (six months) treatment (33.7%). This group accounts for 32.8% of male offenders and 42.5% of all female offenders (Table 2.7).

Offense Groups and Demographics

The most serious crime charged to an incarcerated offender determines his/her offense group classification. The frequency of an offense group varies by gender. Among male offenders incarcerated at the end of FY2020, the greatest numbers are sentenced for violent offenses (43.6 %) followed by sex and child abuse offenses (20.3 %). The most common offenses for females are drug offenses (34.4 %) followed by violent offenses (32.8%) See Table 3.3. Average sentences are longer for males than females in all offense categories with an overall average of 3.8 years longer for men than women (Table 3.4).

Table 3.3. Incarcerations by Offense Group, June 30, 2020

	Count			Percent		
Offense Group*	Female	Male	Total	Female	Male	Total
Violent	671	9,570	10,241	32.8%	43.6%	42.7%
Sex and Child Abuse	151	4,469	4,620	7.4%	20.3%	19.2%
Nonviolent	481	4,192	4,673	23.5%	19.1%	19.5%
Drug	705	3,207	3,912	34.4%	14.6%	16.3%
DWI	40	524	564	2.0%	2.4%	2.3%
Total	2,048	21,962	24,010	100.0%	100.0%	100.0%

Table 3.4. Average Sentences by Offense Group for Offenders Incarcerated on June 30, 2020

	Average Sentence (yrs)				
Offense Group*	Female	Male	Total		
Violent	13.6	15.9	15.7		
Sex and Child Abuse	11.5	16.6	16.4		
Nonviolent	6.8	8.1	8.0		
Drug	7.2	8.7	8.4		
DWI	6.8	7.1	7.1		
Total	9.5	13.3	13.0		

^{*} Violent offenses include homicide, robbery, assault, kidnapping, arson 1st, armed criminal action and serious weapons offenses (felony class A or B). Sex offenses include RSMo 566 sex offenses and RSMo 568 child abuse offenses, excluding non-support. Drug offenses include RSMo 195 and 579 offenses. DWI includes Blood Alcohol Content (BAC) offenses. Nonviolent offenses are other offenses including property offenses, public order offenses, other weapons offenses and other traffic offenses. Life sentences are computed at 30 years.

The data on felony classes in Tables 3.5 and 3.6 reflect the changes on January 1, 2017 to Missouri's criminal code. The revised criminal code has the addition of a class E felony. This new code also introduces a new class C and reclassified class C and D felonies to class D and E respectively.

The data are a mixture of old and new code classifications. More offenders, both male and female, are sentenced with class C felonies (21.1% of males; 31.8% of females). Almost half of all males are charged with class A or B felonies. Males have nearly double the percent of class A felonies as females (22.1% vs 14.7% respectively). Males also have a lengthier average sentence for all felony classes than females with the greater differences observable in class A, B, and unclassified felonies (Table 3.6). For all offenders serving life sentences, nearly 40% are without parole. This percentage is the same for both sexes (Table 3.7). For life sentences by racial/ethnic groups, 16.3% of white and 21% of black offenders have sentences without parole (Table 3.8).

Table 3.5. Incarceration by Felony Class, June 30, 2020

	Count			Percent		
Felony Class	Female	Male	Total	Female	Male	Total

^{**} Life without Parole includes offenders sentenced to 50-year incarceration for Capital Murder.

Top Twenty Offenses

The next five tables contain data on the top twenty offenses in the incarcerated population. The top twenty offenses account for 64.1% of the most serious crimes committed by offenders when tallied on June 30, 2020 (Table 3.9). Robbery 1st Degree ranks first at 8.9% of all offenses. The top twenty female offenses contain 64.6% of all female offenders with the two most numerous offenses being drug related (Table 3.10). Males exhibit a wider range of offenses (than females) with only 64.1% of offenders accounted for in the top twenty offenses (Table 3.11). The top twenty offenses among male offenders contain more personal assault offenses compared with female offenders. Top twenty offenses are similar among racial/ethnic groups; however, disparities exist in the frequency of offenses (Tables 3.12 and 3.13). Drug offenses occur more frequently in the white and other races/ethnicities incarcerated population while robbery and homicide offenses rank higher among the black incarcerated population.

Dangerous Felony Offenses

The percent of incarcerated offenders with dangerous felony classification reveals an increase from FY2010 to FY2020 (Table 3.15). Robbery 1st degree remains the most frequent charge among dangerous felonies. It is important to note that Murder 1st degree is not classified as a dangerous felony but instead is a separate offense with a penalty of capital punishment or life without parole (Chapter 10.).

The number of offenders with life sentences rises steadily from FY2010 to FY2019 but a inconsequential decrease occurs in FY2020 (Table 3.14). However, their percentage of the total incarcerated population hovers around 9%.

4. Comparison with the Institutional Population of June 30, 2015

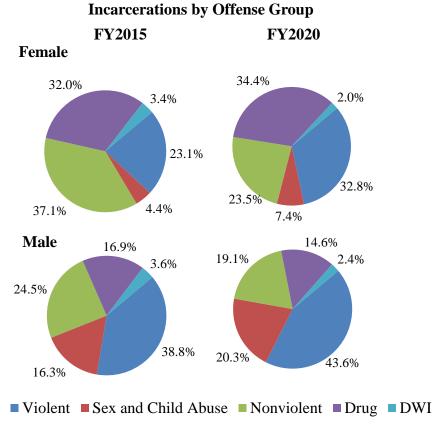

Offense Groups

From FY2015 to FY2020, the female incarcerated population decreased by 36.8% while the male population decreased by 24.4% (Table 4.1). The only increase in offense groups, for females, occurs in sex and child abuse-related offenses (4.9% increase) which represent 7.3% of all offenses among the female population in FY2020. For males, there are no increases among offense groups, but the smallest decrease is also in sex and child abuse-related offenses (5.6% decrease). Male offenders are more likely than females to be sentenced for violent and sex and child abuse offenses (Fig. 4.1). Both male and female offenders have a decrease in number and percent of DWI (driving while intoxicated) and nonviolent offenses when comparing FY2015 to FY2020.

Table 4.1. Five-year Comparison of Institutional Population by Offense Group, FY2015 and FY2020 Cohort

	FY2015				FY2020		Percent Change			
Offense Group	Female	Male	Total	Female	Male	Total	Female	Male	Total

Figure 4.1. Percent of Offenses in each Offense Group for Male and Female Offenders on June 30, 2015 and 2020

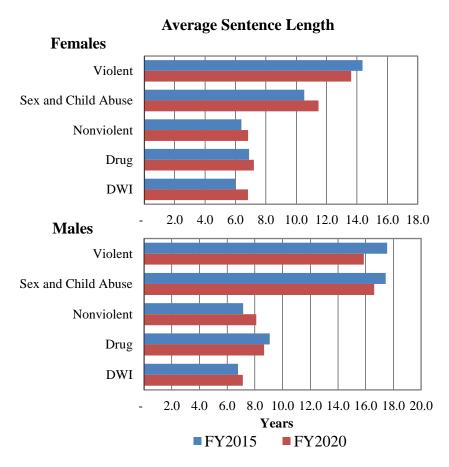

Average Sentences

The average aggregate sentence length for all incarcerated offenders has a total change of 1.9% from FY2015 to FY2020; average sentence length for females increases 11.3% while the average sentence length for males increases 0.8% (Table 4.2). The largest percentage increase in average sentence length for females is for DWI and for males the largest increase is for nonviolent offenses. For offenders incarcerated on June 30, 2020, female offenders are serving an average sentence of 9.5 years while male offenders are serving an average sentence of 13.3 years.

Table 4.2. Five-year Comparison of Average Sentence Length (in years) of Incarcerated Offenders, FY2015 Compared with the FY2020

Total	32,273	100.0%	24,010	100.0%

^{*}Nonviolent Offenses include all offenses not considered Violent or Sex Offenses

Figure 4.3. Five-year Comparison of Violent and Nonviolent Incarcerated Offenders, FY2015 and FY2020

Disparities in Race/Ethnicity and Gender Composition

While overall the incarcerated population decreases 25.6% from FY2015 to FY2020, the percent change, by subgroups, varies widely dependent on race/ethnicity and gender (Table 4.4). While most groups see decreases over the five-year period, Asian males and Unknown males see increases (11.1% and 33.3%, respectively). The largest decreases are seen in the female population, although Hispanic female incarceration decreases the least at 3.6% during the five-year period. Overall, the white incarcerated population decreases 25.7% while the black incarcerated population decreases 26.1%.

Table 4.4. Five-year Comparison of Incarcerated Population by Race/Ethnicity, FY2015 to FY2020

5. Admissions to Prisons

Several metrics are used to calculate admittance to an adult institution. "Admissions" is calculated by how many times the event occurs. It refers to all offenders admitted to prison; if an offender returns multiple times within the fiscal year he/she are counted each time as another admittance. Meanwhile, "number of offenders" refers to only the number of persons admitted to prison, some of which may leave and return but all are only counted once. As a result, the number of "admissions" will always be greater than or equal to the "number of offenders" when calculating admittance.

The term "new admissions" refers to the first admission of an offender for his/her sentence. "Return from supervision" is an offender's subsequent return(s) to incarceration for the same sentence; another term use for this offender is a "violator."

Admissions Type

Total admissions to Missouri prisons in FY2020 show a 16.4% decrease from the previous year. Both new admissions and return admissions show a decrease from the prior year, (Table 5.1 and Fig. 5.1). Table 5.2 includes these admissions broken down between new court commitments, probation revocations, and parole returns.

The comparison of FY2010-2015 data with FY2015-2020 shows a steep increase in the decline in all admission to incarceration. All new admissions are decreasing more than earlier years, especially 120-day and long term drug programs. While returns from supervision increased (1.6%) from FY2010-2015, they decreased (-5.0%) from FY 2015-2020. (See Table 5.3.)

After a nearly 6% increase in female admissions from FY2016 to FY2017, and a slight decrease in FY2018, FY2019 and FY2020 have large decreases in admissions of 12.4% and 22.1%, respectively; the decline in the number of new admissions is responsible for this decreasing trend (Table 5.4). Female admissions to prisons show a cumulative annual decrease at 6.6% in the last five years compared with an average annual 6.2% increase from FY2010-2015 (Table 5.5).

New Admissions by Offense Group

Since 2011, new admissions range from a low of 6,407 in FY2020 to a high of 10,332 in FY2014. From the prior year, new admissions show a decrease of 24% in FY2020. Nonviolent offenses continue to decline from its peak in FY2014; however, they are the largest offense group at 35%, followed closely by drug offenses. New admissions for DWI offenses continue to decline, dropping 38% in FY2020. A decrease in drug offenses continues through FY2020 after a peak in FY2017 (Table 5.8 and Figure 5.4).

Figure 5.6. Ten-year Trends New Male Admissions to a Prison by Offense Group from FY2011 to FY2020

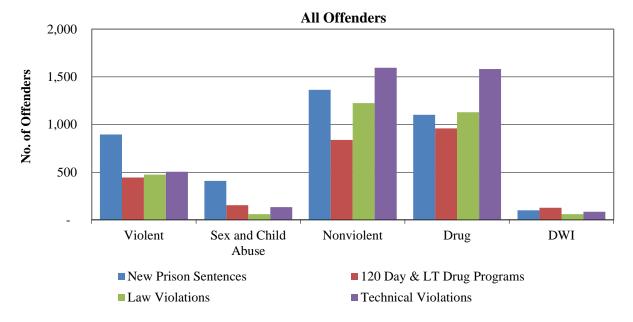

Offenders Admitted in FY2020

The largest number of admissions during FY2020 is technical violation returns for non-violent offenses, followed very closely by technical violation returns for drug offenses (Table 5.11). Nonviolent offenses account for the greatest number of admissions among all offenders. Drug and DWI offenses show greater percentage of admissions to 120-day and long term (LT) drug programs than new admissions; this reflects the purpose of these programs. All offense groups show a similar trend; technical violations returns exceed those for law violation returns (Fig 5.7).

Figure 5.7. Number of Offenders Admitted in FY2020 by Offense Group and Admission Type

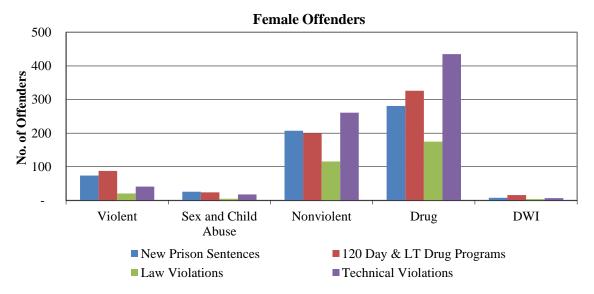

Among all females admitted in FY2020, drug and nonviolent offenses account for 86% of admissions. 52% of all females admissions are admitted to prison for drug offenses. Among new admissions, 52% are sentenced to 120-day or long-term drug programs (Table 5.12). All offense groups show a similar trend where returns for technical violations exceed those for law violations (Fig 5.8).

Table 5.12. Number of Female Offenders Admitted in FY2020 by Offense Group and Admission Type

	New A	Admissions	Returns from	n Supervision		Percent of
	New Prison	120 Day & LT	Law	Technical	Number of	All
Offense Group	Sentences	Drug Programs	Violations	Violations	Offenders	Admitted
Violent	74	88	21	41	224	9.6%
Sex and Child Abuse	26	24	5	18	73	3.1%
Nonviolent	207	200	116	261	784	33.6%
Drug	281	326	175	435	1,217	52.2%

Total	596	654	321	762	2,333	100.0%

Figure 5.8. Number of Female Offenders Admitted in FY2020 by Offense Group and Admission Type

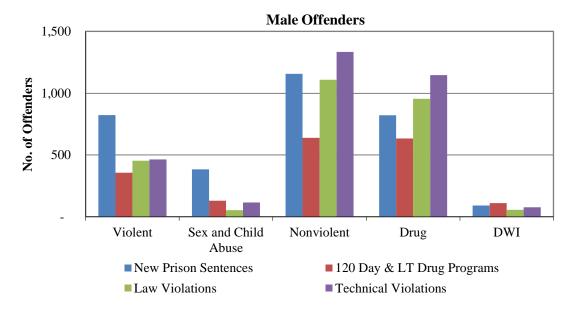

Nonviolent offenses accounted for 39% of all male admissions in FY2020; returns from supervision is the major mechanism of admittance for this offense group (Table 5.13). Offenders charged with sex/child abuse or DWI offenses are least likely to return to incarceration from supervision (24% and 40%, respectively). Persons with nonviolent or drug offenses are most likely to return to prison from supervision (58%). In all offense groups, a technical violation is more common than a law violation as a reason for returns from supervision (Fig. 5.9).

Admissions Demographics

Table 5.21 shows the number of admissions by admission type, race/ethnicity, and gender. Some offenders may have multiple admissions within the fiscal year. Admission types vary by gender and race/ethnicity. For white males, 60% of new admissions are with a new prison sentence, however for black males, that rate is 74%. While black females are more likely to be admitted with a new prison sentence rather than a 120-day and LT, white females are more likely to be admitted with a 120-day and LT. (Table 5.21).

For all offender admissions from FY2011 to FY2020, 16% are assessed as being mentally ill, as determined by assessment. Females exhibit a greater proportion of mentally ill individuals (30%) than males (14%) (Table 5.22). However, both the number and the proportion of male and female offenders needing clinical care or medication generally declines during the ten-year span.

Offenders admitted with medical concerns continue to be a smaller group than those with mental health concerns; on average in the last 10 years, 6% of all admissions require regular or daily nursing and schedule III medications. Medical concerns among female admissions are nearly three times that of male admissions (Table 5.22). The percent of female admissions with medical concerns varies by year but generally declines over the past ten years. Medical needs among males remain somewhat stable within the 10-year span except for a noted drop in 2018.

^{*}Offenders require regular clinic care and psychotropic medication.

Offenders assessed with moderate, intensive or severe substance abuse issues require drug treatment. Over the last 10 years, 86% of all offenders require drug treatment (Table 5.23). This percent has increased slightly since FY2011. The percent requiring treatment reached its highest level during FY2017-FY2018 at 89%.

^{**}Offenders require regular or daily nursing and schedule III medications.

Minimum Prison Term

Minimum prison terms (MPTs) mandated in 1994 established the length of sentence required to be served before eligibility for parole for offenders convicted of dangerous felonies and for offenders with prior incarcerations with Missouri DOC (Section 558.019, RSMo). One prior incarceration required an offender serve a minimum of 40% sentence length before parole; two prior incarcerations required 50%; three or more prior incarcerations required 80%; and dangerous felons serve at least 85% of their sentence. Offenders with drug offenses were not required to serve a minimum prison term for prior incarcerations with DOC.

During FY2020 MPT was eliminated for nonviolent offenses and applied retroactively. Even prior to this statutory change, the number of admissions with MPTs had been gradually decreasing since FY2014.

For the ten-year period since FY2011, a total of 27,219 MPTs were imposed, which encompassed approximately one-third of all offenders admitted with new sentences (Table 5.24). Offenders with sentences that require 40% MPT continue to comprise the largest proportion of new MPT admissions. However, alongside the recent changes in legislation, new MPT admissions were less than one quarter of all offenders admitted on new sentences in FY2020, and the proportion that require 85% MPT are a relatively larger proportion of new MPT admissions than in most previous years.

^{**} No substance abuse indicated

[†]See Table 2.7 for treatment levels for assessment

^{††}Offenders assessed as having moderate to severe substance abuse require treatment. Those with no assessment are excluded from the denominator.

Figure 5.10. Ten-year Trends in New Sentence Admissions with Minimum Prison Terms

Average Sentence

Average sentences for new admissions include both new prison sentences (court commitments) and probation revocations. New admissions exclude offenders serving short sentences under 120-day and long-term drug sentences (559.115, RSMo or 217.202 RSMo). Life sentences are standardized at 30 years for the purpose of computing average sentence lengths.

New admissions since FY2011 are fairly evenly distributed each year between new court commitments and probation revocations. However, male admissions consistently include a greater number of new court commitments, while females incur more probation revocations (Table 5.25). While average sentence length in the past ten years is stable, it has increased slightly for new court commitments but decreased slightly for probation revocations. In general, average sentences for males are roughly 1.5 years longer than females for new court commitments, and 1 year longer than females for probation revocations.

Table 5.26 promulgates data on new admissions by race/ethnicity. In FY2020, the amount of probation revocation admissions and new court commitments among white offenders are nearly identical. For Black and Hispanic offenders, new court commitments surpass probation revocations. All race/ethnicity groups had decreases in new court commitments in FY2020.

The average sentence lengths, for both new court commitments and probation revocation, are stable among black and white offenders. Black offenders sentence length is longer than white offenders for both new court commitments and probation revocation. For FY2020, the sentence length for new court commitments is 2.2 years longer for black offenders compared to white offenders; probation revocation sentences for black and white offenders are 6.5 and 5.7 years, respectively. Other race/ethnicities sentence lengths fluctuate over time, as would be expected with a smaller population size.

In looking at admissions and offense types over the last ten years, different patterns emerge. Since FY2011, probation revocations are consistently the greatest source of new admissions for nonviolent and drug offenses, while all other offense groups have greater admissions from new court commitments (Table 5.27). Among new court commitments, average sentence length slightly increases over the 10-year span, due to increasing length for sex/child abuse offenses, and DWI offenses, however drug offenses show a declining length of 1 year since FY2011. Not surprisingly, the longest average sentence is seen in the violent and sex/child abuse groups. However, probation revocations for DWI sentences exceed in length probation revocations for violent offenses. Sentence length for sex/child abuse offenses exhibit the greatest fluctuation during the 10-year span.

^{*} The felony class of the most populous charge code.

New court commitments include offenders sentenced by the courts to a term commitment. New court commitments do not include offenders sentenced to a 120 day, long term drug program, probation or parole revocations. Offenders convicted of the attempt of the offense are excluded (the offenders are sentenced to one felony class lower.)

The felony class is the current felony class for the offense. Some offenses, including Child Molestation 1st and Endangering the Welfare of a Child have had the felony class of the offense increased during the analysis period.

DWI (577.010) Includes persistent, aggravated and chronic offenses.

The statutory defined offense may include more than one charge code.

Life Sentences and sentences over 30 years are computed at 30 years.

6. Releases from an Adult Institution

All Releases

Since the introduction of the new salient factor guideline assessment in 2004, the number of offenders released to parole has increased along with a reduction in the number of offenders released on the mandatory conditional release date or on the expiration of sentence.

While total releases from incarceration increased each year from FY 2016-19, they dropped slightly in FY 2020 (Table 6.1). While the trend of increasing parole releases continued in FY 2020, there were decreases in number of offenders released to probation and discharged from prison in FY 2020 when compared to FY 2019. The decreases in these types of releases were also continuation of trends starting in FY 2019 for probation and FY 2018 for discharges.

Table 6.1. Number of Releases from an Institution by Release Type, FY2008 to FY2020

^{*}Other includes deaths, interstate transfers and absconders.

Gender

FY2020 shows an increase in the female offender population released, a trend that was reversed in FY 2019 after a six year continued increase. The increase in releases (4.4 %) largely reflects the 31% increase in probation releases. Parole, then probation, are the leading release types for female offenders (Table 6.3 and Fig.6.2). The comparison of FY2008 -15 with FY2015-20 shows a slight percentage change in conditional release types (Table 6.4).

Unlike the female incarcerated population of FY2020, the male incarcerated population continues to experience a decrease in releases, 6.2 %; this reflects a 5% increase in parole releases (Table 6.5). In comparing FY2008-15 with FY2015-20 data, all types of releases remain relatively static as compared with 'other' release types (deaths, interstate transfers, and absconders) (Table 6.6).

7. Time Served to First Release

All Releases

First release is defined as the first release following the admission for a new commitment. Offenders convicted of offenses committed on or after August 28, 1994 are required to serve a minimum prison term (MPT) before first release if they have committed a dangerous felony (85% of sentence) or have prior incarcerations with the Missouri Department of Corrections (40% of sentence for one prior, 50% for two priors, and 80% for three or more prior incarcerations). Time served includes jail time which is credited towards total incarceration time upon entrance to the Department of Corrections. Offenders, with a sex offense conviction under Chapter 566 RSMo, must complete the Missouri Sex Offender Program (MOSOP) before being eligible for a parole release. Offenders, with a chronic DWI sentence, must serve two years before parole eligibility per section 577.012.7(5), RSMo. First releases do not include the releases of offenders who are returned as parole violators or from a 120-day program.

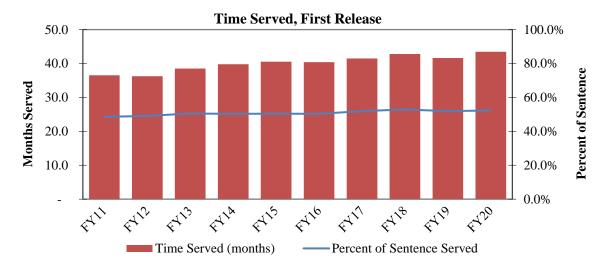

Average time served as a percent of the sentence in FY2020 is 52.3%, slightly more than time served in FY2019 (Table 7.1); the time served shows a gradual increase in the past ten years (Fig. 7.1). This is expected to continue, because of the imposition of MPTs, as time served increases with increasing aggregate sentence lengths.

Figure 7.1. First Release, Trends in Time Served for All Offenders Released from FY2011 to FY2020

Offense Group and Felony Class Release

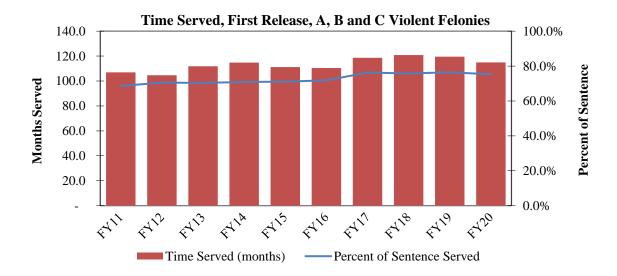

During the ten-year span from FY2011 to FY2020, the longest average aggregate sentence (161.8 months) for class A, B and C Violent felonies occurs in FY2014 and the greatest actual time served (120.8 months) occurs in FY2018 (Table 7.2, Fig. 7.2). The highest percent of sentence served occurs in FY2019 at 76.4% whereas in FY2020 this has decreased to 75.3%.

Figure 7.2. First Release, Trends in Time Served for Class A, B and C Violent Felonies FY2011 to FY2020

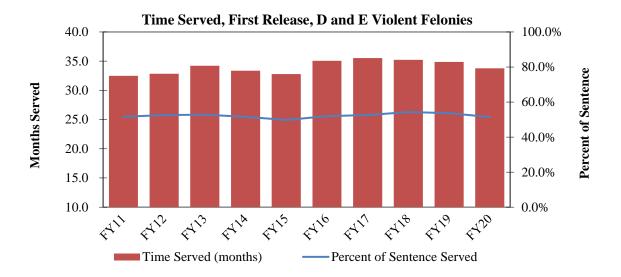

For class D and E violent felonies, not only are aggregate sentence length and time served less than class A, B and C felonies, but the percent of sentence served is lesser as well (Table 7.3). All three measures (aggregate sentence, time served, and percent of sentence served) trend upward over the last ten years. Time served and percent of sentence served both decrease from FY2018 to FY2020.

Table 7.3. Time Served to First Release to Parole or Conditional Release or Discharge for Class D and E Violent Felony Offenders Released FY2011 to FY2020

Figure 7.3. Trends in Time Served to First Release for Class D and E Violent Felony Offenders Released from FY2011 to FY2020

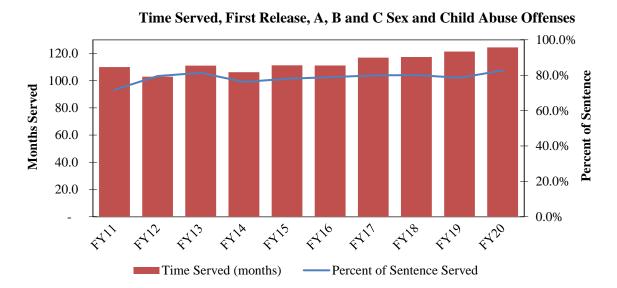

Over the last ten years, aggregate sentence length for class A, B and C sex/child abuse offenses are lesser than for class A, B and C violent offenses. The average percent of sentence served is greater for sex/child abuse offenses than violent offenses, thus making the average time served somewhat identical for both offense groups for class A, B and C felonies (Tables 7.2 and 7.4).

Table 7.4. Time Served, First Release to Parole or Conditional Release or Discharge for Class A, B and C Sex and Child Abuse Felony Offenders from FY2011 to FY2020

Figure 7.4. Trends in Time Served to First Release for Class A, B and C Sex and Child Abuse Felony Offenders Released FY2011 to FY2020

Data from FY2011 to FY2020 show the average aggregate sentence length for class D and E sex/child abuse offenses are longer than class D and E violent offenses; similarly, time served are also longer (Table 7.5). The average percent of sentence served is greater for class A, B and C sex/child abuse offenses than for class D and E violent offenses during the ten-year span.

Table 7.5. Time Served, First Release to Parole or Conditional Release or Discharge for Class D and E Sex and Child Abuse Felony Offenders Released from FY2011 to FY2020

Figure 7.5. Trends in Time Served to First Release for Class D and E Sex and Child Abuse Felony Offenders Released from FY2011 to FY2020

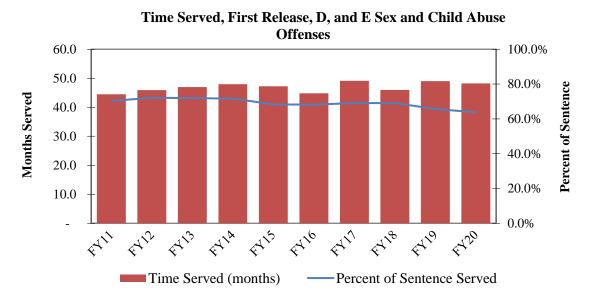

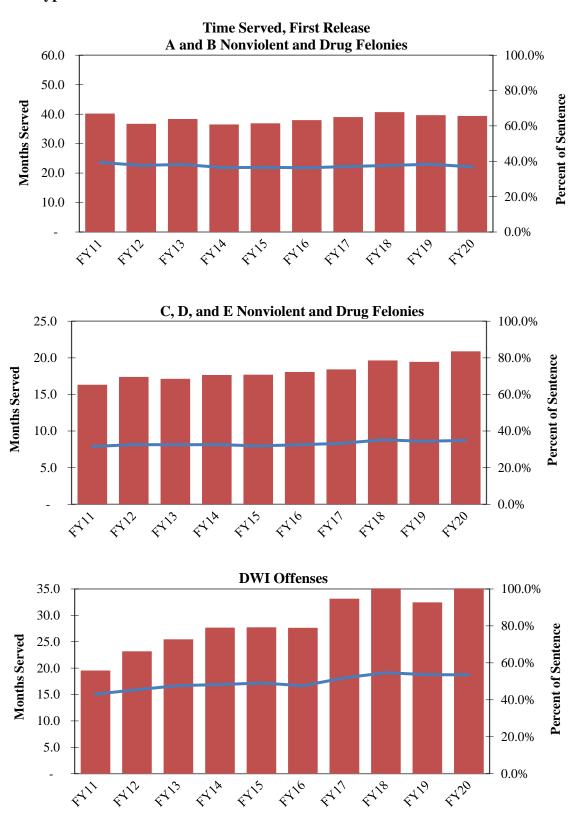

Table 7.6 and Figure 7.6 display a ten-year span of data on nonviolent, drug and DWI offenses. Average aggregate sentence for class A and B nonviolent and drug offenses from FY2011 to FY2020 are nearly twice the length of class C, D, and E nonviolent and drug offenses for time served, the average is slightly more than double. By contrast in DWI offenses, average percent of time served surpasses that in all felony classes for nonviolent and drug offenses during the ten-year span (Table 7.6). Time served and percent of sentence served remains relatively consistent among class A and B nonviolent and drug felonies from FY2011 to FY2020. For both DWI offenses as well as class C, D, and E nonviolent and drug felonies, time served and percent of time served is lowest in FY2011 and steadily increases over the ten year period (Fig. 7.6).

Figure 7.6. Trends in Time Served and Percent of Sentence to First Release for Class A and B Nonviolent and Drug, Class C and D Nonviolent and Drug, and DWI felony Offenders Released by Release Type from FY2011 to FY2020

Percent of Sentence Served

Time Served (months)

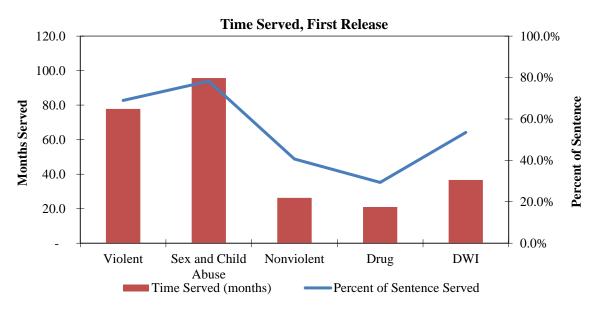

For all offenders released in FY2020, sex/child abuse offenses result in the greatest time served and the largest percent of time served (Table 7.7). Among offense groups, the greatest number of releases occurs in the nonviolent group. The drug offense group exhibits the least time served (21.0 months) and the lowest percent of sentenced served (29.4%) (Table 7.7 and Fig 7.7).

8. Recidivism Rates of Institutional Releases

There are many ways to measure recidivism; currently, no national standard exists. The calculated rates in this Offender Profile are for offenders' first release in the commitment. These are offenders admitted to prison to serve a new commitment and are released to either parole, conditional release or on the discharge of the sentence. Excluded from the calculation is the release of parole violators who have previously been returned to prison for a violation of supervision within the commitment. Recidivism rates that include the release of parole violators are higher than the first release recidivism rates.

Recidivism is a cumulative measure which increases as time from release increases. The recidivism rates measure two outcomes:

- 1. The first return to prison following the release (technical violation of supervision or new conviction)
- 2. The first new conviction following the release from prison (The new conviction can be a new prison sentence or probation.)

Because many offenders returned from parole are retained for a technical violation, the new conviction recidivism rate is not a very helpful indicator of new criminal behavior until two or more years from release.

New convictions include findings of guilt (suspended impositions) and deferred sentences (drug courts, DWI courts and mental health courts) that are supervised by the Board of Probation and Parole. The data for the calculation of the rates are taken from the DOC offender database. Offenses and incarcerations in other states will not be included unless the offender is returned to the custody of the DOC. Other recidivism rates are given in the Offender Supervision profile for offenders released to probation following a 120-day or long-term drug program and for offenders serving a new court probation (Section 17).

Trends

Average recidivism rates, for the FY2011-20 time span, show a steady increase from six months to five year for new conviction recidivism; first returns show a lessening rate of increase after two years (Fig. 8.1).

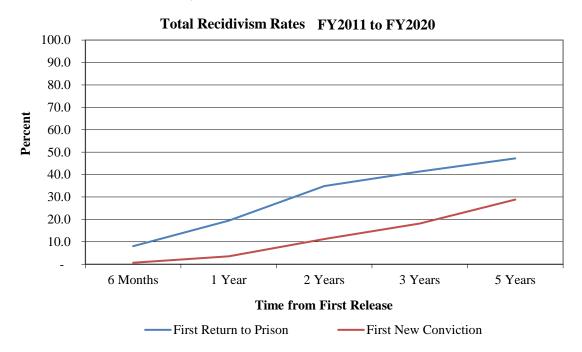

When reviewing Table 8.1, first returns to prison data showing recidivism rates over the past 10 years, no discernible trends are evident. The most recent rates are lower as data entry lags behind. When comparing FY1997-2006 recidivism rate in first returns to prison data with the current 10-year span, a marked decrease in average recidivism rates is shown to have occurred during all time intervals (6-months, 16% vs 8%; 1-yr., 28% vs 20%; 2-yrs., 41% vs 35%; 3 yrs., 47% vs 41%; and 5 yrs., 52% vs 47; respectively). Recidivism rates for first new conviction are stable (FY2011-20) except for the 5-year rate.

Figure 8.1. Total Ten-year Recidivism for All Offenders on First Release to First Return to Prison and First New Conviction, FY2011 to FY2020

Gender

Female offenders have lower rates of recidivism for both first return to prison and first new convictions when compared with males (Tables 8.2 and 8.3); this is true across all time intervals. However, the female recidivism rates at 1, 2 and 3-years incrementally increase since FY2011 for first return to prison; increasing rates with new convictions occur at 1, 2, 3, and 5-years.

Male five-year recidivism rates averages, for first returns and new convictions, are close to 5 percentage points greater than females during the last 10-year time span (Tables 8.2 and 8.3). Both measures of male recidivism show no apparent trends during FY2011-20. As with female recidivism rates, male new conviction recidivism rate increases steadily from six month to five years while first returns show a slower rate of increase after two years (Fig. 8.3).

AVERAGE

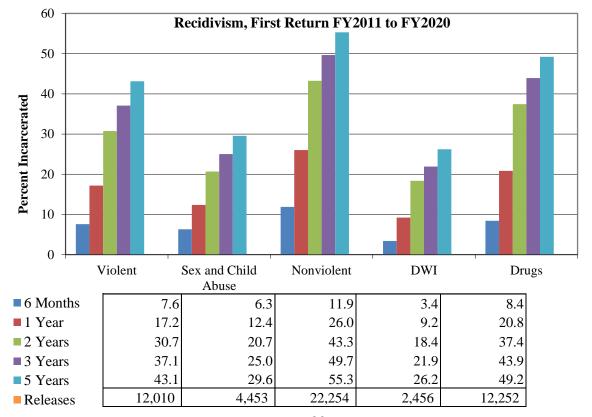

Figure 8.3. Total Ten-year Recidivism for Male Offenders on First Release to First Return to Institution and First New Conviction, FY2011 to FY2020

Offense Group

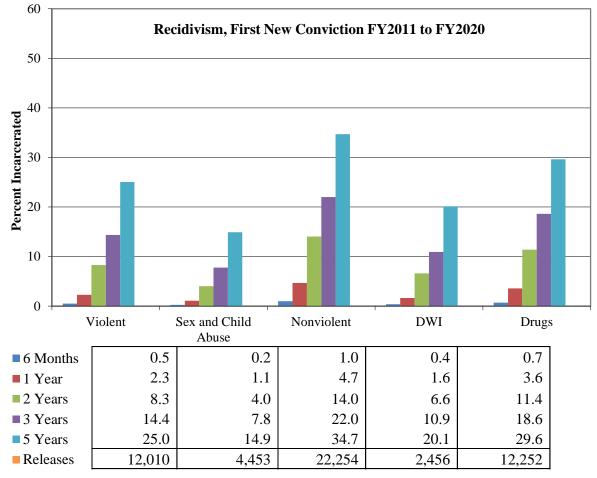

In examination of first released from FY2011 to FY2020, recidivism rate for first returns to prison is lowest for DWI offenders throughout all time intervals (Fig. 8.4). Sex and child abuse offenders have the second lowest recidivism rates for first return to incarceration. Nonviolent offenders exhibit the highest rates of first return recidivism in all time periods.

Figure 8.4. Percent of First Returns to Prison for All Offenders with First Release from an Institution between FY2011 and FY2020 by Offense Group

For first new convictions after first release, nonviolent offenders retain the highest recidivism rates in all time intervals. Recidivism in this group reaches 34.7% within five years for releases between FY2011 and FY2020. The percent of new convictions for sex/child abuse offenders is at the lowest in all time periods. Unlike first return recidivism, first new conviction recidivism is greater for DWI than for sex/child abuse offenders (Fig. 8.5).

Figure 8.5. Percent of First New Convictions for All Offenders with First Release from Prison between FY2011 and FY2020 by Offense Group

9. Sex and Child Abuse Offender Population

The sex offender population comprises offenders with conviction of an offense under Chapter 566 (Sexual Offenses), failure to comply with the sex offender registration laws under Chapter 589 (Crime Prevention), or conviction of a child abuse offense under Chapter 568 (Offenses against the Family) in the Missouri Revised Statutes. Failure to complete the Missouri Sex Offender Program (MOSOP) requires offenders to serve the remainder of their sentence.

Demographics

The FY2020 sex/child abuse population comprises 4, 593 persons—twenty percent of the total incarcerated population. Males comprise the vast majority of offenders (about 98%). White offenders constitute 70% of males and 83% of females among this offense group (Table 9.1). These figures are stable from the previous fiscal year. Seventy-two percent of male offenders in this offense group are currently between age 30 and 59 years of age, evenly distributed among the five-year age groups within that range. Female offenders tend to be younger with 61% between ages of 25 to 39 years (Table 9.2).

Sex Offender Classification

Assessments are conducted to classify an offender's health needs and skill levels. Some offenders may be 'unclassified' which includes recently admitted offenders who have not completed the classification process and offenders sentenced to 120-day programs. Statutory law requires offenders admitted under a 120-day program to be released within 120 days of admission if they successfully complete the program. Therefore, 120-day offenders do not receive a full classification upon admission due to the expected short prison stay.

As of June 30, 2020, seventy-four percent of sex offenders report a HSD/HSE education level with 75% of offenders classified as being at least semi-skilled; these percentages are higher than for all incarcerated offenders (Tables 9.3). A greater percent of females than males are classified as possessing the highest level of vocational readiness (30.3% vs 19.5%, respectively). Yet, a larger percent of women are 'unskilled' compared to men (22.7% vs 14.5%, respectively). A lower percent of incarcerated sex/child abuse offenders than the general institutional population have none or mild mental health problems (82.4% vs 77.2%, respectively) (Tables 2.5 and 9.3). A greater percent of males than females are classified as having 'no mental health problems.' The percentage of females needing clinic care or medication is more than double the percent of males (Table 9.3).

Sex offenders can be housed no lower than C-2 custody level until they have completed MOSOP. Thus, it is not surprising that over 90% of sex/child abuse offenders are classified as C-2 and C-3. A large disparity exits between male and female offenders--92% of male offenders are Level II or III custody while these custody levels contain only 58% of the female sex/child abuse offenders (Table 9.4).

^{*}Percent excludes unclassified offenders

Overall, substance abuse among the sex/child abuse offenders is lower than in the general population (87.4% vs 70.2%, respectively) (Tables 2.7 and 9.5). Short-term treatment is the most common interventional need and accounts for 28.7% of males and 17.2% of females. (Table 9.5).

Comparison of the current year sex/child abuse offender population to that of FY2015 is only valid for large population groups; therefore, comparisons are limited to black, Hispanic, and white males and also white females. Data show no significant change among black and white males; Hispanic male offenders exhibit an increase of 11%. The white female offender population decreases 7% (Table 9.6); this follows a trend from the previous year--comparison of FY2015 to FY2020 data shows a 25% increase of sex/child abuse offenses among white females.

Admissions

Total admissions for sex/child abuse offenses in FY2020 show a 13% decrease from the previous year but overall a 2 percent increase from ten years ago. Year-by-year differences in the percent of sex/child abuse offenses vary during the last 10 years (from -13.4% to 8.4%). New admissions continue to account for two-thirds of all admissions for these offenses which is higher than the general population rate of 50% (Tables 5.1 and 9.9). From FY2010-20, new prison sentences are the greatest source for admissions (Table 9.9). Five-year trends show stable to minimally decreasing population counts (Table 9.10).

Table 9.9. Sex and Child Abuse Offenses by Type of Admission to an Adult Institution, FY2010 to FY2020

Releases

Sex and child abuse offender releases in FY2020 decrease by 2.5% from the prior year. The greatest number of releases each year is releases to parole, followed by discharges (Table 9.11). Releases to probation are for offenders stipulated by the court to the Sex Offender Assessment Unit and assessed as suitable for probation.

Time Served to First Release

Incarcerated offenders, convicted of a sex offense as defined in 589.015, RSMo, are required to complete the MOSOP before being eligible for parole. Failure to complete the program requires the offender to serve the complete sentence incarcerated.

The top twenty sex/child abuse offenses, based on number of releases, have an overall average time served to first release of 74.8 months, a decrease from the last two years (77.6 months in FY2019; 78.3 months in FY2018).

Examination of the last ten years shows that since FY2012 the aggregate sentence length, overall, rises. FY2020 data has a stable aggregate sentence length of 115.1 months (Table 9.13). The percent of time served remains fairly consistent with a range from 71-88% (Fig. 9.2). The largest release types in FY2020 are for parole, then conditional or administrative, and least for discharge (Table 9.13).

Table 9.13. Time Served and Percent of Sentence to First Release for Sex and Child Abuse Offenders by Release Type, FY2011 to FY2020

Figure 9.2. Trends in Time Served to First Release for Sex and Child Abuse Offenders Released from an Adult Institution, FY2011 to FY2020

Recidivism of Sex Offenders

Since FY2011, the percent of offenders returning to prison on a new conviction after completing MOSOP is less than those who failed or refused MOSOP (Table 9.14). Most sex offenders, who are convicted of a new offense, are convicted of a non-sex offense. Recidivism for new sex offense is very low (average of 2.9% at 5-years) (Table 9.15). Sex offender recidivism over ten years shows rates of new conviction rising more steeply between one and three years after release, with a greater and continuing rate of increase after three years (Fig. 9.4). This is in contrast to general offender recidivism where rates seem to level off significantly after two years. The ten-year trend for all sex offenders returning for new sex offense conviction is somewhat different in that the percent return rises steadily to the third year, then increases at a greater rate (Fig. 9.4).

10. Capital Punishment

Execution is an authorized punishment for offenders convicted of Murder 1st degree. Offenders not sentenced to death must serve life without parole. Although the new capital punishment law became effective in Missouri on May 26, 1977, the first execution in Missouri, following the US Supreme Court decision authorizing the legality of capital punishment statutes, took place in 1989. During the last 20 years (July 1, 2000 to June 30, 2020), forty-nine executions occurred, with two occurring in FY 2020.

The statistics in table 10.1 count offenders with a conviction of Murder 1st degree for an offense committed after October 1984 or a conviction for capital murder prior to October 1984 as equivalent offenses. Prior to October 1984, Murder 1st degree allowed parole. Re-sentencing and commutation of the death penalty are not included in the charts.

Data from FY2020 show 21 offenders awaiting execution and 20 admitted with a sentences of life without parole. In FY2020, no offender entered prison on a death sentence. Since first enactment of the law, admissions on death sentences have been between zero and three offenders per year. The number of persons with life without parole admissions varies, ranging from 15 to 47 offenders per year during the last 20 years (Table 10.1).

Table 10.1. Sentence for Murder $1^{\rm st}$ Degree, Executions and Sentence Outcome, FY2000 to FY2020

FY2020	21	2	20	-	20	0.0%
TOTAL	_	49	626	24	650	3.7%

The twenty-year trend for Murder 1st degree sentences with life without parole shows a quadrennial decrease since 2001. Both sentences of life without parole and death decrease overall since FY2001 (Fig. 10.1). From FY2001 to FY2020, black offenders have received 53% of Murder 1st degree sentences; at the same time, black offenders receive a lower percentage of the death sentences than white offenders (29% and 71%, respectively) (Table 10.2).

11. Supervised Population

Probation and Parole statistics include Missouri field supervised offenders, interstate offenders, and offenders supervised in community supervision and reentry centers.

Demographics

The supervised population as of June 30, 2020 is more than double the institutional population (59,769 vs 24,010, respectively) (Tables 11.1 and 2.1). The male supervised population is about 2 times larger than the institutional male population; the number of females on supervision are 7 times greater than the incarcerated female population. This leads to a ratio of one female for every ten males in prison, but one female to every three males on supervision. Supervised black and white females are represented in percentages very similar to the respective percentages of the incarcerated population (Tables 2.1 and 11.1). For the supervised male population however, the percent of white males is higher and percent of black males is lower than in the incarcerated population. In comparing the parole and probation population, the percent of white females is similar for parole and probation. This is not true in comparing the male probationers and parolees. White males occur as a greater percentage of male probationers (75.5%) than male parolees (69.9%). For black males the reverse occurs with a lesser percent of probationers (21.8%) than parolees (28.2%) (Table 11.1).

Supervision Assessment (Offender Need Scores)

During the first 120 days of field supervision, the offender is in the assessment period. At the end of that period, the supervision level depends on the field risk reduction instrument completed by the probation and parole officers. This assessment is based on the offender's prior history and current interaction with the community and is derived from the Need Score results. The Need Score is a risk and needs assessment also completed by the supervising probation and parole officer and contains component scores for law (new offenses), technical violations, social, employment and substance abuse. The social score measures all family, medical, mental health and financial issues.

For offenders on regular supervision, the assessment is updated every 60 days. The assessment determines the level of supervision and the need for community programming and supervision strategies. The scoring of the components of the last needs assessment on or before June 30, 2020 is shown by the level of supervision. Offenders in community release centers are not included in the Need Score assessment. In addition, a substance abuse classification and assessment (SACA) has also been conducted since its introduction by the Department in 2003. Most SACA assessments are completed on admission to prison and at the start of field supervision (probation or parole).

Law scores are based on new arrests. The majority of parolees and probationers (79.9% and 81.1%) have no arrests within three months prior to assessment. Technical scores are based on technical violations of probation or parole conditions; most offenders have no violations in the previous six months (62.9% and 63.7%) (Table 11.4). No gender differences are noted in law or technical scores. Approximately two-thirds of both males and females have social issues requiring intervention. This percentage is similar for parolees and probationers.

Employment score among the field population varies by gender and supervision group. Among parolees, 50.3% of females and 56.6% of males have some type of employment for the previous three months. The percentage is greater for probationers with approximately 61.5% of females and 68.8% of males are employed is some capacity (Table 11.4).

The percent of parolees and probationers exhibiting no substance abuse for six months prior is 70.1% and 68.3% respectively. In drug/alcohol usage, no observable differences exist between probationers and parolees (Table 11.4).

SACA scores differ between parolees and probationers. Parolees tend to need more treatment than probationers. Among parolees, the most common classification is "significant" substance abuse which requires 6-month treatment, 44.1%; this is followed by a score of "moderate" requiring short term treatment, 28.7% (Table 11.5). Among probationers, most common is "moderate" (35.7%), followed closely by "significant" (32.2%). Regardless of supervision type, females require 6-month drug treatment at a higher rate than males, while a higher rate of males require short term treatment. Among parolees, fewer females are without substance abuse issues than males (4.2% and 6.4%, respectively). In the case of probationers, a slightly greater percent of females than males are classified as having no substance abuse (12.4% and 10.8%, respectively).

Offense Groups

Among both parolees and probationers in FY2020, the greatest percent of male offenders are supervised for nonviolent offenses and female offenders for drug offenses. For parolees, violent and sex/child abuse offenses compose a larger percent than among probationers (Table 12.4). This is not surprising due to the nature of the offenses and associated penalties. The percentage of probationers supervised for DWI offenses is nearly the same as among parolees. Average probation terms are similar for males and females, but among parolees males tend to have longer term lengths than females across all offense groups (Table 12.5)

Table 12.4. Supervised Offenders in Each Offense Group on June 30, 2020

^{*} Violent offenses include homicide, robbery, assault, kidnapping, arson 1, armed criminal action and serious weapons offenses (felony class A and B). Sex offenses include 566, RSMo sex offenses and 568, RSMo child abuse offenses, excluding non-support. Drug offenses include 195 and 579, RSMo offenses. DWI includes BAC (excessive blood alcohol content) offenses. Nonviolent offenses are other offenses, including property offenses, public order offenses, other weapons offenses and other traffic offenses.

Nonviolent offenses are other offenses, including property offenses, public order offenses, other weapons offenses and other traffic offenses.

Top Twenty Offenses

Among all subgroups of parolees, the twenty most common offenses make up 65.1-76.9% of all offenses (Tables 12.7 – 12.10). Among probationers, the top twenty offenses make up 60.3-73.2% of all offenses. The top offense for parolees and probationers is possession of a controlled substance (195.202 or 579.015, RSMo) (Tables 12.6), while the top one for incarcerated population is felony robbery 1st degree (569.020,RSMo) (Table 3.9).

13. Comparison with Supervised Population of June 30, 2015

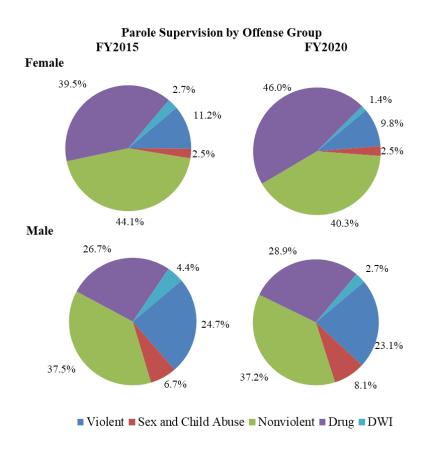

Offense Groups

In the past five years, overall parole population increases 21.4% and the number of female parolees rises 40.5% and becomes a larger percent of the parolee population (15.1% of the population in FY2015 vs 17.5% in FY2020) (Table 13.1). Among the five offense groups, DWI experiences the greatest decrease in offenders (females -28.8%; males, -26.8%). For female parolees drug offenses and sex and child abuse offenses show marked increase from FY2015 to FY2020. The relative percentage of males remain unchanged from 2015 to 2020 in violent and nonviolent offense group. (Fig. 13.1). Among female parolees, drug convictions are an increasing relative percent of offenses in FY2020, surpassing the predominance nonviolent offenses in FY2015.

Table 13.1. Male and Female Parole Supervised Offenders by Offense Group and Percent Change, FY2015 to the FY2020

Figure 13.1. Percent of Offenses by Offense Group, All Parolees, June 30th, 2015 and 2020

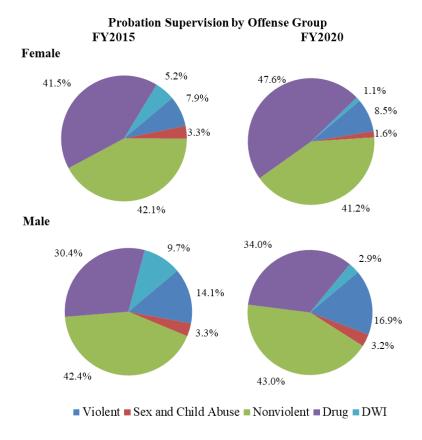

Similar to the parolee population, over the last five years, the number of probationers has decreased (9.4% drop); however, the decrease predominantly occurred in male (11.8% drop) and the female population decreased by 3.1% (Table 13.2). Both genders show decrease counts in sex and child abuse, nonviolent and DWI offense types. DWI offenses drop the most (74.9%). The relative percentage of male and female probationers with violent offenses group increases while the relative percentage of sex and child abuse, nonviolent, and DWI offense decreases when comparing FY2015 to FY2020 data (Fig. 13.2)

Figure 13.2. Percent of Offenses by Offense Group, All Probationers, June 30th, 2015 and 2020

Average Sentence

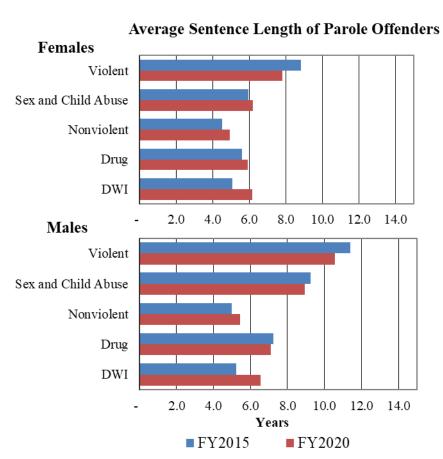

Average sentence length of offenders on parole decreases slightly from FY2015 for both genders (Table 13.3). Only DWI sentence length changes notably with an average increase of 24.6% from FY2015 (See Table 13.3). Average sentence lengths for male parolees are markedly longer than females in the following offense groups: violent, sex/child abuse and drug offenses (both in FY2015 and FY2020) (Table 13.3).

Table 13.3. Five-year Comparison of Average Sentences (years) of Parole Offenders by Offense Group, FY2015 and FY2020

Figure 13.4. Probationers: Average Term Length by Offense Group and Gender, FY2015 and FY2020

Violent and Nonviolent Compositions

In comparing FY2015 data to FY2020, the percentage of parolees supervised for violent and sex offenses decreases for females and remain unchanged for males (Fig. 13.5). However, for both genders, the majority of offenders are under supervision for a nonviolent offense.

For probationers, violent and sex offenses are less prominent, percentage-wise, than among parole offenders (Figs. 13.5 and 13.6). Comparing FY2015 data with FY 2020, female probationers slightly drop in the percent of violent of violent and sex offenses. Among male probationers, a slight uptick in the percent of violent and sex offenses is observable.

Racial Composition

The black male and female parole populations decreases (-6.1% and -116.7%, respectively). For race/ethnicity groups with a small population, interpreting changes is difficult.

From FY2015 to FY2020, probation population data display an even greater percent change, -9.4%. The black female probation population decreases the most by 23.8% (Table 13.5). As before, for race/ethnicity groups with small populations, interpreting the data is difficult.

14. Supervision Openings

All Openings

Supervision openings show a sharp decrease, at 17%, in FY2020 from FY2019 data (Table 14.1). The decrease occurs across all opening types. Releases to parole is the largest in terms of absolute count (13,397). Overall, in the last 5-year time span, counts by opening types are relatively stable (Table 14.2).

Table 14.1. Supervision Opening Type from FY2010 to FY2020

Openings by Gender and Race/Ethnicity

Total female supervision openings decrease in FY2020 by 22%; this is a significant shift from previous years when the population has been increasing. (Table 14.3). The decreases occur in all supervision opening types (Fig. 14.2). In comparing the annual average percent changes of FY2009-14 with FY2014-19, each type of supervision openings exhibits increase when comparing the former to the later, again with the exception of 'New Probation' and '120-Day Probation Release'.

The most common opening type in FY2020 among all race/ethnicity and gender groups is a new probation. Parole releases rank second for black males, white males, and white females. For black females, absconder returns ranks second.

15. Supervision Closings

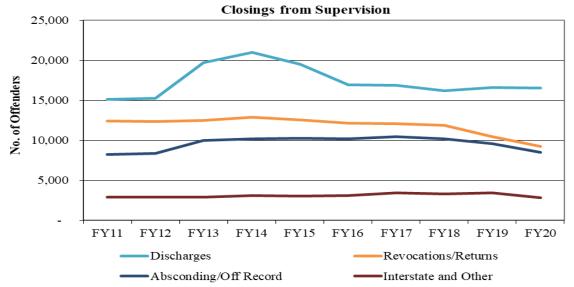

All Closings

Since September 1, 2012, offenders on probation and parole are able to earn compliance credits (ECC) by maintaining good behavior, thereby reducing the time to completion of their sentence (HB1525). The result of ECC is a sharp increase in discharges during FY2013 and FY2014. The increase in discharge closing types continues (but less dramatic) from FY2015 through FY2020 (Fig. 15.1). The numbers of revocations/returns has decreased slightly in FY2020 but the interstate/other remain consistent over the past ten years (Fig. 15.1).

Table 15.1. Number of Closings from Field Supervision by Closing Type, FY2011-20

Figure 15.1. Ten-year Trends in Closings to Supervision by Closing Type from FY2011 –FY2020

Closings by Gender and Race/Ethnicity

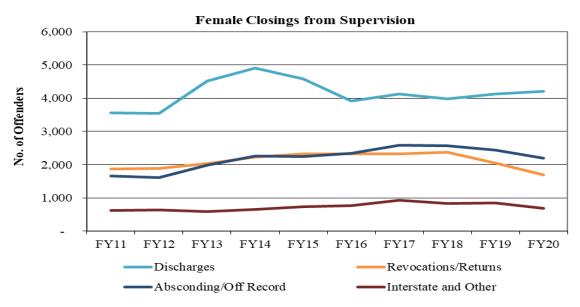

The total number of closings in the female supervised population decreases from the previous year by 7% (Table 15.2). The number of female discharge closings are still above the pre-ECC level (Fig. 15.2). Examination of the ten-year span reveals a steady rise in female revocation/returns even though the female field population declines during the same period (Tables 1.3 and 15.2).

Figure 15.2. Ten-year Trends in Closings Types from Supervision among Females, FY2011-FY2020

The total number of closings in the male supervised population decreases from the previous year by 7% (Table 15.3). The number discharge closings remained above pre-ECC levels for males. Over the ten-year span, the numbers of revocations/returns and interstate closing types remain stable overall, although it has decreased slightly in the FY 2020. The percent of discharged closings in each year hovers in the 37 to 44% range which is lower than the range for females.

16. Time under Supervision

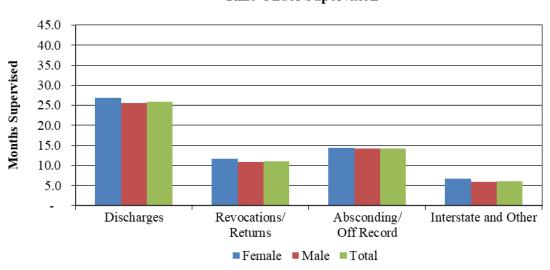

Total and by Gender

In FY2020, probationers and parolees average around 18 months under supervision. Discharged offenders average two years and two months under supervision. (Table 16.1). Discharged females tend to serve slightly longer terms than males (Fig. 16.1). Revocation/return offenders average 11 months under field supervision before returning to incarceration (Table 16.1).

Figure 16.1. Time under Supervision by Closing Type in FY2020

Time Under Supervision

Offense Group

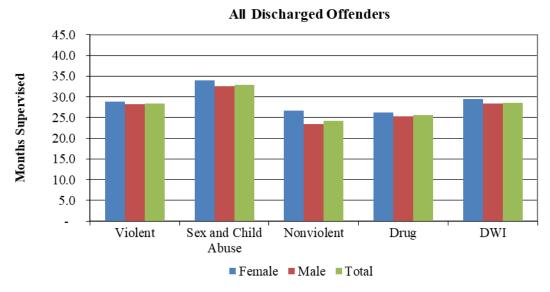

Violent offenses include homicide, robbery, assault, kidnapping, arson 1st degree, armed criminal action and serious weapons offenses (felony class A and B). Sex offenses comprise 566, RSMo sex offenses and 568, RSMo child abuse offenses, excluding non-support. Drug offenses include those from Chapters 195 and 579, RSMo. The DWI designation entails BAC (excessive blood alcohol content) offenses. Nonviolent offenses are other offenses, including property offenses, public order offenses, other weapons offenses and other traffic offenses.

As with the institutional population, discharged sex/child abuse offenders serve the longest average time under supervision (Tables 3.4 and 16.2). Nonviolent, drug, and DWI offenders serve comparable lengths of time (Table 16.2). Females tend to serve a longer average time than males for nonviolent, sex/child abuse, DWI and drug offenses (Fig. 16.2).

Table 16.2. Time under Supervision for All Discharged Field Supervised Offenders by Offense Group in FY2020

	Fen	nale	Ma	ale	Total

TOTAL/AVERAGE	4,217	26.9	12,310	25.6	16,527	25.9	

Figure 16.2 Time under Supervision for All Discharged Field Supervised Offender by Offense Group, FY2020

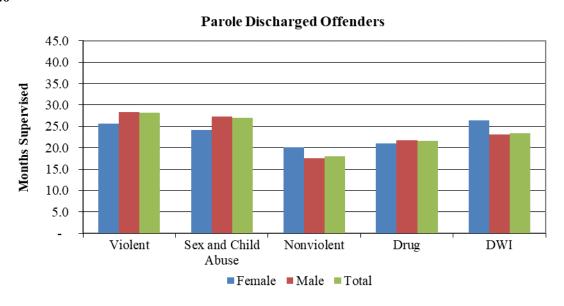

In looking at parolees only, supervised offenders serve an average time 4-5 months less than the average for the total field population (Tables 16.2 and 16.3). Persons with nonviolent offense serve the shortest time on average. Total average supervised time is comparable between females and males (Fig. 16.3).

Please note that since FY2013, legislation allows offenders to accrue Earned Credit Compliance (ECC). This change allows for eligible offenders with eligible offenses to take 30 days off their sentences for every 30 days that they are compliant on supervision. This reduces time on supervision for many offenders. Because certain violent crimes and sex/child abuse crimes are not eligible; these offense groups are largely unaffected by ECC.

Table 16.3. Time under Supervision for Parole Offenders Discharged by Offense Group, FY2020

Figure 16.3. Time under Supervision for Parole Offenders Discharged by Offense Group, FY2020

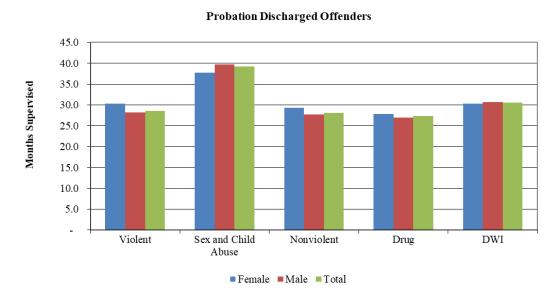

For probation discharged offenders, the longest average time is once again for sex/child abuse followed by DWI offenses (Table 16.4). Males serve an average of two months longer for sex/child abuse offenses than females. However, total average supervised time is similar for females and males.

Figure 16.4. Average Months under Probation Supervision by Gender and Offense Group for All, Male and Female Probationers Discharged from Field Supervision in FY2020

17. Recidivism Rates of Selected Supervised Offenders

Recidivism rates in this section refer to new probationers and new 120-day and long-term drug program (120d/LT) offenders released to probation. See Recidivism Rates of Institutional Releases for explanation of recidivism terms (Section 8). For recidivism rate of 120d/LT program, only offenders with a new offense sentenced to a program and released to serve probation are used for calculations. This section excludes offenders serving probation and revoked to 120d/LT drug program sentence in its calculations.

Total Recidivism

In FY2013, five-year recidivism among 120d/LT offenders for either first return or first new conviction is 41.5%, slightly down from 41.7% for FY2010 releases (Table 17.1). Six-month recidivism is slightly lower in FY2019 then in the previous year but still above the ten-year average. Furthermore, latest one, two, and three-year recidivism rates are higher than the 10-year average.

Now let's look at recidivism rate of new probationers sentenced for a new offense. The time to the first incarceration or first new conviction is calculated from the start of supervision. Among all new probation offenders for either violation or new conviction, recidivism rates generally increase each year in all time intervals from FY2010 to FY2019 (Table 17.2). The only exception is the rate of first new convictions which has a stable rate. For first new convictions only, three-year recidivism rates is at its highest levels during the ten-year interval (16.1 %). All other recidivism periods exhibit minimal increases or remain constant.

Table 17.1. Recidivism for New 120-day and Long-term Drug Program Participants Released to Probation from FY2010 to FY2019 on First Return to Incarceration for Violation or New Conviction (new prison or probation sentence) and for New Conviction Only

For both 120d/LT offenders and new probation offenders, average recidivism for first return or new conviction is higher for males than females over the last ten years (Table 17.3). Recidivism is higher for 120d/LT offenders than new probation offenders in all periods except six-months. At six-months, new probation recidivism for females equals males. The 120d/LT male offenders have a greater recidivism rate than the other groups. All groups display a slowing of the rate of recidivism after two years.

Table 17.3. Ten-year recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2010 to FY2019 on First Return to Incarceration for Violation or New Conviction (new prison or probation sentence)

First Return for Violation or Incarceration for New Conviction

		Percent Incarcerated Within						
Probation Type	Openings	6 Months	1 Year	2 Years	3 Years	5 Years		
120-Day and Long-T	erm Drug R	Probation						
Female	2,349	2.9	11.5	25.5	34.1	38.5		
Male	12,016	4.1	13.7	29.5	37.9	43.4		
New Probation								
Female	40,709	4.7	11.3	20.8	26.1	29.9		
Male	107,023	4.7	12.2	23.3	29.8	34.9		

Figure 17.1. Ten-year Recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2009 to FY2018 on First Return to Incarceration for Violation or New Conviction (new prison or probation sentence)

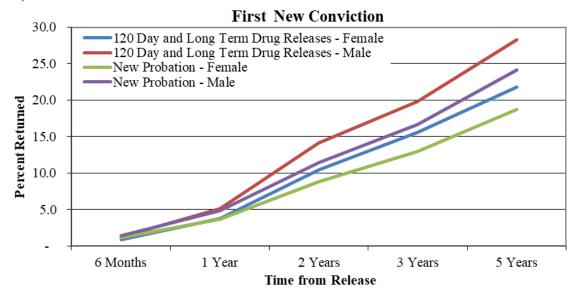

Now let's look at new convictions only for 120d/LT offenders and new probation offenders, FY2010-19. Similar recidivism rates occur in all subgroups at 6 months; at one year, the higher rate for males becomes apparent. After one year, male 120d/LT recidivism becomes notably higher than male new probation recidivism. See Fig. 17.2.

Table 17.4. Ten-year recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2010 to FY2019 on First New Conviction (New Prison or Probation Sentence)

Ten-Year Recidivism for Supervised Offenders FY2011 to FY2020 First New Conviction

		Percent Incarcerated Within				
Probation Type	Openings	6 Months	1 Year	2 Years	3 Years	5 Years
120-Day and Long-Term Drug Releases to Probation						
Female	2,349	0.9	3.8	10.4	15.6	21.8
Male	12,016	1.3	5.1	14.1	19.9	28.3
New Probation						
Female	40,709	1.2	3.6	8.8	13.0	18.8
Male	107,023	1.4	4.8	11.4	16.7	24.1

Figure 17.2. Ten-year Recidivism by Gender with 120-day/long-term Drug Treatment and New Probation Offenders from FY2009 to FY2018 on First New Conviction (New Prison or Probation Sentence)

Offense Group

Among new probations and 120d/LT released to probation from FY2010 to FY2019, recidivism for combined first returns and new conviction is lowest for DWI at all time periods (Fig 17.3). Violent and nonviolent offenses are similar in recidivism rates and carry the highest rates. Recidivism rates for drug and sex/child abuse offenders are similar and lower than violent and nonviolent offenses.

Figure 17.3. Recidivism Rates as Percent of First Returns and New Convictions for Supervised New Probation and 120-day/long-term Drug Program Offenders (includes offenders released from FY2009 to FY2018, and total number released by offense group)

In looking at first convictions only, nonviolent supervised offenders released from FY2010 to FY2019 display the highest rate of new conviction recidivism for all time periods (Fig. 17.4). This is similar to institutional new conviction recidivism (Fig 8.4). DWI offenders have the lowest recidivism for six months to three years. At year five, sex/child abuse offenders exhibit the lowest recidivism rate.

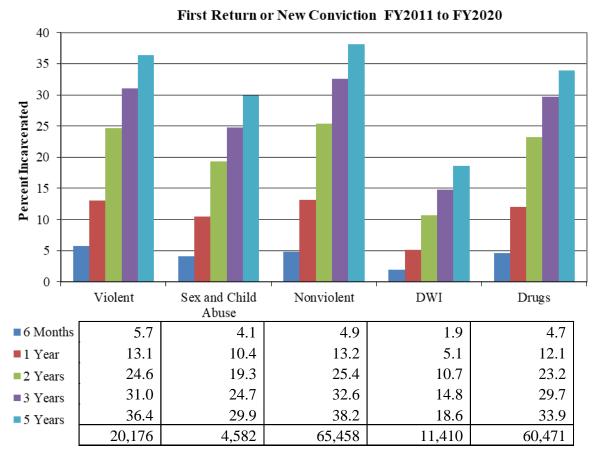

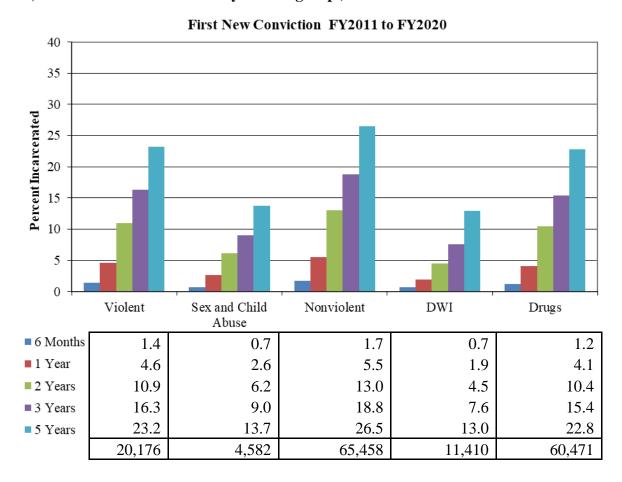

Figure 17.4. Recidivism Rates as Percent of New Convictions for Supervised New Probation and 120-day/long-term Drug Program Offenders (Includes offenders released from FY2009 to FY2018, and total number released by offense group.)
